# 3rd, 4th and 5th responsible etc.

This solution makes it possible to assign more responsible for Organisations than the current two, and apply access rights to these responsible:

The solution only affects organisation responsible and not responsible on activities, opportunities, orders and support cases.

The access rights related to the other responsible than the first two will be the same for all connected users. This means that the 3rd responsible will have the same access and rights related to the customer as the 4th, 5th and so on.

The solution uses Custom Plus fields of the type "All users" to hold the information about the responsible users and require Enterprise licenses. These fields will always contain a list of the active users in the webCRM system and can, as other custom fields, be named after the customers wishes. It gives the option to have 20 extra responsible on top of the two standard fields.
